PROFESSIONAL SUMMARY

Software Engineering student at Monash University (Honours, expected 2027) focused on cloud engineering. Hands-on projects with AWS (IAM, Lambda, API Gateway, KMS), Terraform, Linux and Python. Built a full-stack SaaS application with custom backend authentication. Background in risk and compliance in regulated manufacturing.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate
- CompTIA A+ (Coursera)
- AWS Solutions Architect Associate (in progress)
- CompTIA Security+ (in progress)

CLOUD PROJECTS

Secure AWS Serverless Messaging Framework (github.com/n8nunes/secure-widget-backend)

- Designed AWS infrastructure using Terraform (infrastructure as code) with least-privilege IAM access controls
- Implemented AWS KMS encryption aligned with NIST SP 800-53 and the CIS AWS Foundations Benchmark
- Built on serverless components including AWS Lambda and API Gateway

Automated Security Compliance Assessment Tool (github.com/n8nunes/security-analysis-automation)

- Built an automated tool that assesses compliance posture against industry frameworks.
- Mapped security gaps to governance and compliance frameworks.

EXPERIENCE

Founder / Security Lead, UniLinq (unilinq.org) | 2026 to Present

- Built a full-stack web application with a Node.js backend and PostgreSQL database hosted on Supabase
- Designed and built custom backend authentication and access control
- Wrote the database migrations and data model, and made decisions about how systems work and why
- Architected a queue system for the AI matching algorithm that schedules SME tasks by priority and estimated processing time
- Developed the AI matching algorithm and applied the NIST AI RMF to the AI chatbot and matching engine, documenting AI risks and aligning the system with the framework
- Coordinated with external partners and subject matter experts

GMP Processor / QA Compliance, Ensign Laboratories | 2022 to 2026

- Collected, reviewed and maintained regulatory compliance evidence against documented SOPs and standards in a controlled manufacturing environment
- Identified recurring risks, documented findings in detail, and escalated issues to supervisors
- Applied structured problem-solving to meet compliance requirements within operational deadlines

EDUCATION

Bachelor of Software Engineering (Honours), Monash University | 2022 to 2027 (expected)

- Coursework in data structures, algorithm design and Agile methodology

TECHNICAL SKILLS

Cloud and Infrastructure: AWS (IAM, Lambda, API Gateway, KMS), Terraform, serverless architecture, cloud security, least-privilege access control, Linux, Docker

Backend and Data: Node.js, Python, TypeScript, PostgreSQL, Supabase, API design, queue-based system design

Security and Compliance: NIST SP 800-53, NIST AI RMF, CIS Benchmarks, ISO 27001, compliance assessment, risk documentation, control mapping
